

Votiro Disarmer Where Others End, We Begin.

VOTIRO DISARMER FOR EMAIL

Protect Your Emails & Attachments with Functionality Fully Intact

When Sandbox is Just Not Enough

Today's most sophisticated malicious file attacks are those that bypass most security barriers under the radar, leaving enterprises in their most vulnerable state: unaware and unprotected. Emails have increasingly gained popularity as one of the most common targets for dangerous malicious content attacks, exposing organizations to identity thefts, banking scams, spear-phishing, zero-day, and ransomware attacks.

But Content Has to Keep Flowing In

Organizations cannot function without seamless, latency-free data flow via email communication.

Hermetically Securing Email Data Flow with Zero Latency

Votiro Disarmer for Email targets the most commonly exploited file formats by neutralizing exploit attempts prior to their disclosure and before any other security system can provide protection against them. The cleansed files are fully reconstructed for a continuous, undisturbed workflow and secure management of incoming email attachments.

IN LESS THAN 1 SECOND, WHILE COMPLETELY INVISIBLE TO USERS, VOTIRO DISARMER ALLOWS IMPECCABLE WORKFLOW, WITH FULL FILE FUNCTIONALITY AND ZERO LATENCY

Benefits

- ▶ Enjoy proven, patented protection by an award-winning next-gen CDR technology and a Gartner Cool Vendor.
- ▶ Protect your emails and attachments against the most sophisticated threats
- ▶ Drive better performance with impeccable workflow
- ▶ Eliminate human-error risks
- ▶ Start quickly with few-clicks integration with any email server
- ▶ Deploy on premises or in the cloud

Increased Productivity Features

- ▶ Lightweight footprint for processing thousands of emails per hour
- ▶ Comprehensive report generation
- ▶ Scalable deployment (future-proof protection)
- ▶ Low TCO and easy maintenance
- ▶ Zero latency

How Votiro Disarmer for Email Works

The incoming email messages are automatically routed to the Votiro Disarmer, which then dissects every email traversing into the organization to its basic elements such as HTML body and attachments, inspecting those elements and then recursively cleansing each of them

from any potentially exploitable content and malicious code, thus providing a safe message. The disinfected files are reconstructed, while preserving the integrity and functionality of the original data, and are then sent to the organization's email server, safe to save and edit.

CLOUD MAIL

ON-PREMISES

"We receive thousands of emails a day, so we needed a solution that can work fast without interrupting day-to-day activities. As a cloud-based service, the Votiro Gateway was simple to deploy and started working immediately. We still receive malicious emails, but now they're sanitized by the Votiro Disarmer for Email."

Amir Bar-Oz, CEO

Votiro Disarmer is today's most advanced proactive email defense allowing you to *Communicate, Collaborate, and Perform safely, safely, at ease, and without hurting your workflow.*
